Why we recommend solar, battery and Social Energy

You probably already know that going solar is a smart choice. Lots of your neighbours likely already have slick black panels on their roof, taking advantage of the best energy mums available. But now, there's an even better way to go solar, with bigger savings throughout the year. With a solar and battery system from Solar Power Nation, we'll connect you to Social Energy the energy retailer designed especially for homes with solar and battery storage - who will pay you more money for any solar you don't use. That means you get the best savings and get to be independent of the big energy retailers!

- Power your home during the day with free energy from the sun
- Keep running for less at night, with solar stored in your battery
- Get paid the up to 4 X more for the solar you don't use vs. big retailers[3]

Any questions? Here's the answers to the questions we get a lot:

Q1. Will I receive the same savings as the examples on this page?

No...But that's not a bad thing - you could actually save more than the examples here! Every home is different, as is every solar and battery installation. In order to create an accurate saving projection for your home, you will need to book a free solar and battery assessment, with one of our expert team of energy assessors.

Q2. How do solar systems produce electricity to power my home?

The electricity collected from the solar system is converted from direct current (DC) to alternating current (AC) with the help of a solar inverter. Electricity generated by the solar system is first utilised by the house, with any leftover paid back to the grid at a rate decided by your Electricity retailer FIT (Feed In Tariff). If you choose a Social Energy package with Solar Power Nation, you'll get access to the market leading FITT!

Q3. Does a solar system work at night to keep powering my home?

With solar on its own, no. However, we recommend installing a smart battery alongside solar panels, so that you can keep using your own free green power day and night.

Q4. Do solar panels work even when the weather is cloudy?

Yes! Solar panels work off of daylight, not just direct sunlight. Typically on a cloudy day, the performance of the solar system is half what you would normally produce on a sunny day. When you get your free quote, we factor weather data into our projections for your average solar generation, so you have a realistic idea of how your solar system will perform over the course of the year.

Q5. Do I have to pay for the full cost of the system up front?

No - in fact many of our customers choose to spread the cost, so that they can save as they pay, with the cost of the system offset by the savings that they make. In some cases, the savings made are so high, that the cost of the Social Energy system can be greater than the monthly system payment, meaning you can be cash positive with your green investment!

Q6. Is there any government support available for solar and battery systems?

As Australia goes green, there are some fantastic savings available with government incentives. These vary region to region and are subject to eligibility. To find out what savings you could be eligible for, book a call with our expert team today.

[1]Based on a customer with 6,000 kWh consumption and 8,000 kWh generation purchasing a solar and 11.8kWh battery system for a typical price of $14,000 and being supplied by Social Energy. This customer moves from their standard, import only, market offer, estimated at $2,131, to a first year net bill with Social Energy of -$91.

[2]Carbon offset equivalences are based upon an Australian residential solar system, generating 8,000kWh per year, with a 20 year guaranteed performance period and 0.5% annual linear panel degradation, equating to a total of 80,000kWh over the 20 year period. Using the Australian Government's Clean Energy Regulator's Small Scale Technology Percentage Calculator, demonstrating carbon offsets of equal measure to eliminating 126 metric tons of carbon dioxide entering the atmosphere.

[3]Social Energy FIT: up to 4x higher claim is based upon Social Energy's 40c FIT rate compared to an average market FIT rate in the NSW region of 8.36c/kWh. This is calculated using the Australian Energy Market Operator's (AEMO) Wholesale Spot Price for the NSW region, for the 12 months from 1st July 2019 to 30th June 2020, and averaging the weekly FIT for the week 13th - 19th June 2020. Social Energy 40c kWh Feed in Tariff is capped at a fair usage policy of 20kWh per quarter. After the cap is second the tariff is paid at a typical market rate for any remaining export.

Social Energy as featured on: THE AUSTRALIAN | 9 | Today | Herald Sun | TODAY NSW | The Telegraph | pv magazine

Typical customer saving: $1,160 extra per year

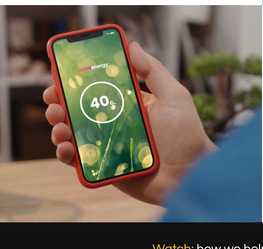
based upon a home in New South Wales using 6,000kWh of electricity annually with 8,000kWh of solar generation[1]

Stop wasting your free solar energy and paying big bills

You've already made the smart decision of going solar, but you're still wasting money on big energy bills, isn't it time you unlocked the real potential of your solar system? With an expert assessment from Solar Power Nation, you can find the perfect battery for your home, letting you store the excess solar that you generate during the day, ready to power your home at night.

- ✅ Reduce your energy bills to as little as $0[1]
- ✅ Use your solar energy in the day and at night
- ✅ Avoid big energy price hikes for years to come

STOP PAYING BIG BILLS



Get paid up to 4X more for the solar you don't use with Social Energy[2]

When you get a battery from Solar Power Nation, we'll connect you to Social Energy, a smart energy retailer built for homes with solar and battery systems. With Social Energy, you'll be free from the big energy retailers and get access to a Feed in Tariff of 40c, for every unit of solar that you don't use at home or store in your battery, as well as getting a super low standard energy plan, if you ever need a little extra power.[2]

- ✅ 40c. feed in tariff for the solar you don't use[2]
- ✅ Free all-in-one solar, battery and energy app
- ✅ Carbon offset energy as standard

Any questions? Here's the answers to the questions we get a lot:

Q. Will I receive the same savings as the examples on this page?

No...but that's not a bad thing - you could actually save more than the examples here! Every home is different, as is every battery installation. In order to create an accurate saving projection for your home, you will need to book a free battery assessment, with one of our expert team of energy assessors.

Q. Will I be able to be completely off grid without an energy supplier?

Being off grid isn't the best solution for most Australians. That's why we've partnered with Social Energy, so that you can get a great price for energy from the grid when you do need a top up, as well as getting paid a 40c. feed in tariff for the solar you don't use.[2] With this solution, you can get great savings without the massive costs associated with going 100% off grid.

Q. Can I add more panels to my existing solar system to get more power?

Yes! You can upgrade to more panels on your solar system, however you are limited by the size of your inverter. The best way to work out what to do with your existing solar system is to speak to one of our solar experts and discuss your options.

Q. Do I have to pay for the full cost of the system up front?

No - in fact many of our customers choose to spread the cost, so that they can save as they pay, with the cost of the system offset by the savings that they make.

Q. Is there any government support available for battery systems?

As Australia goes green, there are some fantastic savings available with government incentives. These vary region to region and are subject to eligibility. To find out what savings you could be eligible for, book a call with our expert team today.
